US 7615021 B2: The technology disclosed provides the following advantages:

- ✓ Provides external support in hinge joints of the body.
- ✓ Helps address joint fatigue, pain.
- ✓ Provides the capture and return of energy generated naturally during the gait cycle.
- ✓ Advantages of side struts used include substitution of side struts having different ranges of elasticity and flexing properties for providing the desired degrees of flexibility at the hinge joint combined with degrees of rigidity in the first direction along the opposite sides of the framework.

US 7670306 B2: The technology disclosed provides the following advantages:

- ✓ Provides elastically stretchable framework.
- ✓ Advantages of side struts used include substitution of side struts having different ranges of elasticity and flexing properties for providing the desired degrees of flexibility at the hinge joint combined with degrees of rigidity in the first direction along the opposite sides of the framework.
- ✓ A benefit of the openings extending from inner to outer surfaces of the framework is that these openings may permit portions of the area of the body that are in abutting engagement with the framework to breathe, especially where the inner surface directly contacts the body and no intermediate member extends there between, such as a liner.⁴
